Software Updates & Upgrades

Sometimes it is hard to tell if you should do an update or not when you see a pop-up message. Every week we are all nagged about this update or that upgrade. This month I would like to introduce a new website page I am working on (and will keep up-to-date) that will help you know the difference between updates you should do and those you should not do. To make it simple I will use the website address http://updates.pctutor.com so all you have to do is go to this website whenever you have a question about whether to do an update or not.

If I give the update/upgrade message a green OK then go ahead and do it. But if I give it a red STOP then don't. This should make it easier to know what to do and you will always have the same place to go to find out. So bookmark/save as a favorite the website http://updates.pctutor.com.

I hope this helps.
