

Safari

- ⌘L to Open Location (like Safari for Mac, this selects the address bar so you can start typing to open a URL or search. You can't move up/down with the keyboard to select results though)
- ⌘T to open a new tab
- ⌘W to close the current tab
- ⌘R to refresh the current tab
- ⌘. to stop loading the current tab
- ⌘G and ⌘↑G to move between Find In Page results (activate Find In Page with touch from the address bar, tap the search field at the bottom, then try the shortcuts)
- ⌘[and ⌘] for navigation

Note: Safari can't switch between tabs or search in the current page with keyboard shortcuts in iOS 7.0.3.

Mail

- ⌘N to create a new message
- ⌘↑D to send a message (from the Compose screen, [it also works](#) in other apps that implement a Mail sharing feature)
- ⌫ (backspace) key to delete the currently selected message
- ↑/↓ arrows to select suggested email address in To/CC/BCC popover fields

Pages

- ⌘↑K to comment
- ⌘⇧K to show next comment
- ⌘⇧⇧K to show previous comment

- ⌘I/B/U to make text italic, bold, or underlined
- ⌘D to duplicate the current object (such as an inline photo)
- ⌘↶ to end editing and select parent (in table cells)
- ↶ to insert a new line, ⌘↶ to select next cell (in table cells)
- → to move to next cell, ⌘→ to move to previous cell
- ⌘↶ to select cell above the current cell
- ⌘↑/↓/→/← (arrow keys) to create a new row or column
- ⌘↑/↓/→/← (arrow keys) to first/last cell in current row or column

Note: several keyboard shortcuts are shared across all the iWork apps, but we'll repeat them in individual sections for clarity purposes.

Numbers

- ⌘⌘K to comment
- ⌘⌘K to show next comment
- ⌘⌘K to show previous comment
- ⌘I/B/U to make text italic, bold, or underlined
- ⌘D to duplicate the current object (such as an inline photo)
- ⌘↶ to end editing and select parent
- ↶ to select next cell
- → to move to next cell, ⌘→ to move to previous cell
- ⌘↶ to select cell above the current cell
- ⌘↑/↓/→/← (arrow keys) to create a new row or column
- ⌘↑/↓/→/← (arrow keys) to first/last cell in current row or column

Note: It's possible that these shortcuts were enabled before, but I've added them for the sake of completeness because I haven't seen them documented anywhere else.
