

Some of my clients do not realize that my business has expanded to all mobile devices. In fact, any consumer electronic product that you can purchase I can help you with. So if you would like help setting up or syncing your new smartphone or tablet or connecting your new TV to the Internet, just let me know.

New iPhone, iPad and iPod touch Software Update

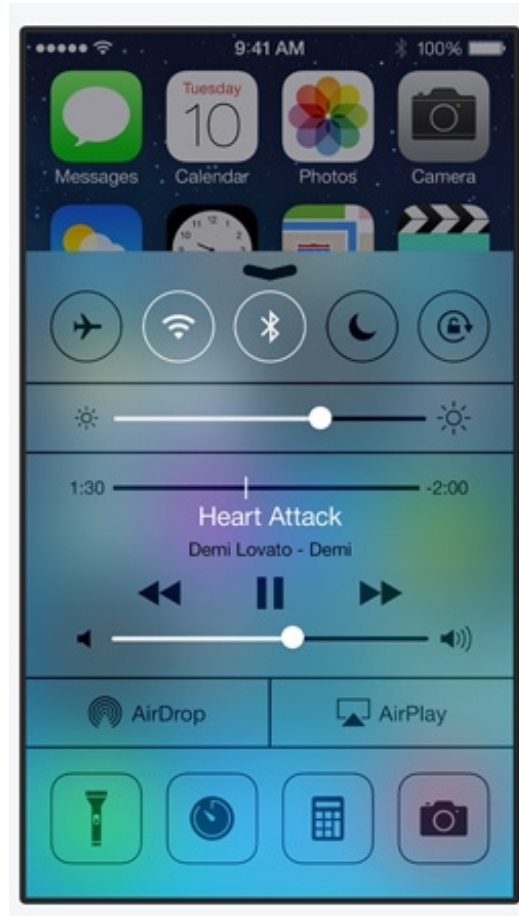

The big news last month was *Apple's* release of their new operating system for *iPhones*, *iPads* and *iPod touches* called iOS 7. When you see any news about "iOS" this has to do with the operating system (OS) for *Apple's* portable devices. This is not the same thing as the operating system for *Mac* computers. That is called "OS X" and the next new version of OS X, 10.9 Mavericks, will not be out until later this year.

iOS New Look

iOS 7 has a new look to it that I think most people will like. The icons on

your device screen will change and some of the features will too, but for the most part your *iPhone* or *iPad* will still function the same.

iOS 7 Control Center

One of the best new features is the new Control Center. Slide your finger up from the bottom of the screen to reveal a number of frequently used commands. This is a quick way to get to the Camera, Calculator, Airplane mode, WiFi, Bluetooth, Lock Screen and a new Flashlight (which uses the camera flash as a light), just to name a few. Try it for yourself to see what each button does. The button picture is a clue to what it does. *AirDrop* is a way to send a picture to another *iPhone* or *iPad* nearby. *AirPlay* is a way to display what is on your iOS device to an Apple TV connected to your large TV.

iOS 7 Multitask

Double press the Home button and you will see all the apps that your device has open. Switch to another app by touching it. Close an app by sliding it up. Note: It is always a good idea to close your open apps every day to keep your device running as efficiently as it can and to save battery power. You can use two or three fingers to close more than one app at a time. With two or three fingers slide the open apps up to close them.

iOS 7 Update

To upgrade your *iPhone*, *iPad* or *iPod touch* to iOS 7 touch the Settings icon, then touch General, then touch Download and Install (or just Install). This will take almost an hour to do so do it only when you don't need to use your device for awhile. Then be prepared to play with your device for to learn all it can do. (Note: Unfortunately, some early models of *iPhones* and *iPads* can not get iOS 7.)

Here are some good links to learn more about the new iOS 7:

See it in action on Apple's website: <http://www.apple.com/ios/> (click "Watch the iOS 7 video)
